Review of instruments operation

Dear Olga Nikolaevna!

Today MIKO-7M instrument is operated in the electrotechnical laboratory of Baltstroyservice, LLC.

The instrument is used during periodic and acceptance tests of power station electrical equipment, such as power transformers, high-voltage switches, short-circuit switches. MIKO-7M is convenient and easy in operation, has a simple user-friendly interface. The application of this instrument has made it possible to reduce the time for measurements.

I have been operating the instrument for two years and can confidently recommend it for use.

Head of ETL

Dvornikov S.A.
