Dear Olga Nikolaevna!

MIKO-7 manufactured by SKB EP, LLC has been operated in the electrical laboratory of Altair, LLC since 2012.

The instrument is used for commissioning works on transformers from 6 to 330 kV. We have to travel all over the country with instruments, because we are an installation and checkout organization.

There were no problems with damage of the instrument during transportation due to shockproof materials and compact size of MIKO-7.

This instrument has an ability to get 12V DC supply that is convenient while working in field conditions. We also have installed an advanced software to bring the measured resistance to the set temperature, through which we can quickly analyze the obtained measurement data.

MIKO-7 comes with its own standard wires with a separate cable for extension. This is very convenient when it is necessary to work on transformers of different sizes

Moreover, the instrument provides a continuous measurement function for transformers with OLTCs and indicates the end of measurement process. This function significantly speeds up all measurements.

Having had an experience in instruments operation since 2012, Altair, LLC thanks SKB EP, LLC for the manufacture of high-quality products and for the expressed interest in the operating experience of using their instruments.

Head of the Commissioning works Sector

E.N. Novikov
