Review of instrument operation

Dear Olga Nikolaevna!

At this time, at our enterprise, specialists use the micromillio-cilo-ohmmeter MIKO-2.3 instrument for your products, check power transformers 6/0.4 kV, switching devices 6 kV, 0.4 kV and explosion-proof electric motors 0.4 kV.

The use of MIKO-2.3 instrument simplifies and greatly speeds up the process of checking electrical equipment, unlike other analogues of the instrument.

During the year of operation, the instrument revealed numerous defects in electrical equipment, such as heating of the contacts of the switching device, damage to the windings of intrinsically safe electric motors, etc.

After operation of MIKO-2.3 we confidently recommend to use it. TOO "Gas Processing Company" expresses its gratitude to SKB EP for the quality instrument and wishes you success in your activities!

Director
